Latest Exam Guide & Learning Materials

Exam : **VMCE_V9**

Title : Veeam Certified Engineer
(VMCE 9.5) Certification v9.5

Vendor : Veeam

Version : DEMO

NO.1 A Backup administrator is looking to achieve a minimal RPO. Which of the following setups is most appropriate?

- A. Backup jobs can be started manually at any time
- B. Each backup job serves as a source for an appropriate replication job
- C. Backup jobs are performed on a regular basis
- D. Backup jobs run continuously

Answer: D

NO.2 Which of the following conditions require Microsoft VSS rather than VMware Tools quiescence? (Choose the 2 appropriate options)

- A. The backup data is to be encrypted
- B. Reverse Incremental backup mode is used
- C. Exchange server backup logs truncation is necessary
- D. The VM in question utilizes Linux as a guest operating system
- E. Point-in-Time Restore for Microsoft SQL Server is required

Answer: A,D

NO.3 Veeam Explorer for Microsoft SQL Server offers which of the following capabilities? (Select 3 options)

- A. Sending SQL tables as attachments via email
- B. Restoring a SQL table to the original server or different server
- C. Restoring a database to the original server or different server
- D. Exporting a database to a local folder or network drive

Answer: B,C,D

NO.4 What does a .vsb file contain?

- A. Backup data blocks
- B. Backup chain metadata
- C. Tapes inventory and catalog
- D. Pointers to backup data blocks

Answer: D

Explanation

How Virtual Full Backup Works

When the tape job archives the forever incremental backup chain, it copies the full backup from disk only once. After that, it copies new increments and creates virtual fulls regularly, or, if archiving of increments is disabled, creates only virtual fulls.

To create a virtual full backup, Veeam Backup & Replication uses a small temporary file of the VSB (Veeam Synthetic Backup) format. The VSB file does not contain backup data; it contains pointers to data blocks inside files of the backup chain on disk that are required to build a full backup as for the needed day. Using these pointers, the tape job detects these blocks and writes them to tape.

NO.5 Choose the correct statement about undoing the failover:

- A. All the changes performed at the replica are transferred to the original VM
- B. Undoing the failover switches the replica back to the primary VM, discarding all changes that were

made to the replica while it was running

C. Undoing the failover switches the replica to the Failback state

D. After the Undo Failover option is performed, the VM replica is used as the original VM.

Answer: D

NO.6 Which Veeam Backup & Replication architecture component is intended to take the data processing load off the backup server?

A. Veeam Cloud Connect

B. Veeam Backup Enterprise Manager

C. Veeam Backup Proxy

D. Veeam Installer Service

E. Veeam Backup Service

Answer: C

NO.7 Which of the following statements regarding encryption in Veeam Backup & Replication are true? (Choose three.)

A. To ensure backups stored on tape are encrypted, enable encryption in the Tape Media Pool

B. If data is encrypted at rest, it means a Backup to Tape job is storing encrypted backups on tape

C. A Backup Job has encryption enabled and is used at the source for a Backup to tape Job. If the Tape Media Pool has encryption enabled, the data will be encrypted a second time

D. A Backup Job has encryption enabled and is used at the source for a Backup to tape Job. If the Tape Media Pool has encryption enabled, the data will be not encrypted a second time

E. To ensure backups stored on tape are encrypted, enable encryption in the Backup to Tape job

F. If data is encrypted at rest, it means a Backup Job targeting a Backup Repository has encryption enabled

Answer: A,B,C

NO.8 Veeam Extract utility can be used to recover VMs from a full backup file (VBK). The extract utility does not require any interaction with Veeam Backup & Replication and can be used as an independent tool on Linux and Microsoft Windows machines.

Where is Veeam Extract utility located?

A. %PROGRAMDATA%\Veeam folder

B. %PROGRAMFILES%\Veeam\Backup and Replication\Backup folder

C. On the Veeam website in the Free tools section and in the Veeam Backup & Replication ISO file

Answer: B

Explanation

Reference Where is Veeam Extract utility located

NO.9 Under certain circumstances, VMware Changed Block Tracking (CBT) may be unavailable for Backup & Replication. What effect will a lack of CBT information have on the Veeam backup job?

A. Veeam Backup & Replication will perform a full backup automatically

B. The backup job will fail

C. The backup job duration will increase

D. File Level Recovery would take a longer time for this restore point

Answer: C

NO.10 Which of the following statements are true when utilizing a Microsoft Hyper-V Off-Host Backup Proxy?

(Choose two)

- A.** The version of the Hyper-V host and the Off-Host Backup Proxy must match
- B.** Hyper-V Nano Server is supported when utilizing Hardware VSS
- C.** Hyper-V must be Windows 2012 or newer
- D.** The Hardware VSS provider must be configured
- E.** Veeam Backup from Storage Snapshots must be enabled

Answer: A,D

NO.11 From within which of the following software products can the Veeam Backup & Replication Infrastructure be remotely monitored when plug-ins/add-ons are installed? (choose the 2 appropriate options)

- A.** LabTech
- B.** Continuum
- C.** Kaseya
- D.** N-Able
- E.** GFI MAX

Answer: A,C

NO.12 Which is a prerequisite in order for the CRC check to be executed during a SureBackup Job?

- A.** One or more of the SureBackup recovery verification tests failed
- B.** The Backup file integrity check option was enabled in the SureBackup job settings
- C.** The repository where the backup is stored is a Shared Folder (CIFS/SMB)
- D.** The .vbm file is corrupt

Answer: B

NO.13 If the network is disconnected during the data transfer process, the "Resume on Network Disconnect" feature will NOT re-establish the connection for which of the following Veeam Backup & Replication jobs?

- A.** Backup Job to local Backup Repository
- B.** Backup Job to Cloud Repository (Cloud Connect Backup Repository)
- C.** All of these jobs support the "Resume on Network Disconnect" feature
- D.** Replication Job

Answer: C

Explanation

Reference https://helpcenter.veeam.com/backup/hyperv/resume_disconnect_network.html

NO.14 Which is the main advantage of using SAN snapshots for backups?

- A.** Helps you avoid creating a VMware snapshot.

- B. Speeds up the backup process.
- C. Decreases the amount of time the VM is running on a VMware snapshot.
- D. Saves space in the repository.

Answer: C

NO.15 Which of the following describes Veeam Data Mover Service function most accurately?
(Choose the 2 appropriate options)

- A. Communicates with the VSS framework during backup, replication and other jobs, and performing recovery tasks
- B. Performs data compression, deduplication and data transfer
- C. Deploys and coordinates executable modules that perform main job activities on behalf of Veeam Backup & Replication
- D. Analyzes the system, installs and upgrades necessary components and services depending on the role selected for the server

Answer: A,C

NO.16 Which backup method will always produce a full backup as the most recent restore point?

- A. Forever Forward Incremental backup
- B. Forward Incremental backup
- C. Reverse Incremental backup

Answer: C

NO.17 When should you consider disabling multithreaded data transfer?

- A. When the simple deployment scenario is used
- B. When several jobs are scheduled to run at the same time
- C. When the backup traffic needs to be routed over a non-production network
- D. When it is required to keep production storage availability from being impacted by the load from backup tasks

Answer: B

Explanation

schedule several jobs to run at the same time,

References:

NO.18 Which of the following suggestions is considered best practices for the Veeam Backup & Replication Integration with Dell EMC Data Domain?

- A. Ensure the high compression level is utilized
- B. Ensure the reverse incremental backup method is utilized
- C. Ensure parallel processing is disabled for jobs targeting Dell EMC Data Domain backup repository
- D. Locate the gateway server close to the deduplication appliance

Answer: B
